Subject: SR2 Performance

Frank,

[REDACTED]

The last time I looked at this was November 1, and the numbers I reported before are still accurate:

[REDACTED]

- An ECG recorded within 15 minutes of an SR1 notification is AF 16% of the time

Last time this seemed like sufficient evidence that SR2 was working just as well on watchOS5 as on watchOS4. [REDACTED]

[REDACTED]

So presumably, the sensitivity is lower despite the PPV coming out (surprisingly) the same. [REDACTED]

[REDACTED]

Alex
